ASANA / OPTIONAL SETUP

Import the starter once.

Import Job Search Asana Starter.csv into a new project. Button names can vary by account.

1 Create a project

Choose Create > Project > Import. Name your project. Choose Private to me if available, then check who has access before adding real applications.

2 Choose the CSV

Select file to import opens the upload area. Choose Select a CSV file to import and select Job Search Asana Starter.csv.

3 Check the preview

Confirm Name, Description and Section are recognized. Choose Go to project to finish importing.

4 Open Board

You should see Leads, Tailoring, Applied, Offer, Rejected/Closed and Not pursued. The three help cards are in Leads. An extra empty Untitled section can be ignored.

Import once: CSV adds tasks, so importing again creates duplicates. Make later updates on the existing cards.

Download the starter CSV and view the example:
martaavilesmontalvo.github.io/job-search-starter/tracking.html

ASANA / YOUR FIRST CARD

Put the next step on the card.

In Leads, open BLANK APPLICATION - Duplicate this card. Search your board before adding a role you may already have.

1 Duplicate the blank card

Open the top-right three-dot menu > Duplicate task. Enter Company - Role (add the job ID if available). Keep Task description and Projects checked, then choose Create new task.

2 Fill in the details

Put the application link and job description in the task description, along with your next action. Assign the card to yourself. Under Last contact / next step, record who owes the next response.

3 Set the date and stage

Set a due date for the next action, if it has one. Explain the deadline or your own reminder under Why / when. Move the card into the matching stage.

After you submit, move to Applied. Attach the exact résumé sent (plus cover letter or answers, if relevant). Record the submission date and confirmation in the description or a dated comment.

For an active application, finishing a reply means updating the next action and date. Leave the application task incomplete.
