CHOOSE YOUR NEXT APPLICATION

Which application should you work on next?

A familiar role, a better-paid one, a stretch you want. Before you tailor another résumé, check which are worth pursuing.

01 **Can you make a case for the work?**

Connect the core responsibilities and scope to experience you can explain. Transferable experience counts.

02 **Does anything rule it out?**

Check your firm requirements and any confirmed barrier. A preference you can negotiate is different from a dealbreaker.

03 **What still needs an answer?**

Name the missing detail. Keep the role in consideration while you clarify it.

You do not need to match every bullet or have held the same title.

COMPARE WHAT MATTERS TO YOU

Decide what matters most to you.

These questions informed my search. Your priorities decide how much each matters.

01 **Your case for the role**

How closely do your examples match the work and responsibility level? Where is the stretch?

02 **Compensation**

Compare pay on the same basis. Separate your minimum from your target, and keep unknown bonus or equity visible.

03 **How the work may change with AI**

Look at the tasks: routine production, judgment, relationships and responsibility. What could change, and what remains uncertain?

Agree what counts most before using scores. Your interest in the work still belongs in the decision.

A COMPARISON YOU CAN MAKE YOURSELF

Which would you apply to first?

Fictional example: you coordinate across teams, produce reports and have improved one team’s process. You prioritize process work over higher pay. Both roles meet your firm requirements.

01 **Process coordinator**

Coordinate a rollout under a manager. More process work; a larger scope. Confirmed pay meets your minimum.

02 **Reporting coordinator**

Produce reports and maintain dashboards. Closer to your current work. Confirmed pay is higher on the same basis.

03 **Start with the process role**

You have relevant experience, and process work matters more to you than the pay difference. Prepare your process-improvement example.

Keep the reporting role on the list. A second choice can still be worth pursuing.

USE YOUR AI TO TEST THE COMPARISON

What could change that order?

Give your AI both full postings, your experience and priorities. Ask it to show the evidence behind its recommendation.

01 **Check the stretch**

Does the process role coordinate delivery or own it? Ask AI to connect the actual responsibility level to your examples.

02 **Check the work behind the title**

Is reporting mainly routine production, or investigating problems and advising decisions? Ask how that task mix could change with AI. Leave this assessment open when the postings lack evidence.

03 **Show what would change the choice**

If higher pay became your priority, the reporting role could move first. More analysis than expected could also make it more appealing.

If you use scores, agree the criteria and weights first. Ask what evidence or priority would change the recommendation.

PUT IT TO WORK

Leave with a next step for each opening.

Open Compare openings. Bring the employer postings and include jobs you have already saved.

01 **Review it yourself**

Check the work, your experience and the conditions. Note what appeals to you and choose your next step.

02 **Use your AI**

Prepare a prompt with your context and openings. Copy it into your AI, agree your priorities and review its comparison.

03 **Choose where to act first**

Pursue a role, clarify a question or pass with a reason. An unanswered question does not always need to delay an application.
